Notice of Planning Study Public Meeting

MACHIAS DYKE BRIDGE FEASIBILITY STUDY: OPEN HOUSE

SEPTEMBER 14, 2021, 4-7pm

The purpose of the study is to identify the preferred alternative for the rehabilitation or the replacement of the existing Dyke Bridge over the Middle River on Route 1 in Machias.

MaineDOT will have staff available on the Machias Dyke Bridge causeway to discuss the history, status, and regulatory requirements of the feasibility study. This event will be an open-house format, during which members of the public will be able to interact, ask questions, and provide comments regarding the future of the Machias Dyke Bridge. MaineDOT, federal agency partners, and others will staff tables associated with different project components, such as alternatives under consideration. If this open-house event cannot be held on the causeway due to weather or other factors, it will be relocated to the Machias High School.

MaineDOT is conducting this public meeting to inform the public and invite public comments. We are particularly interested in learning local views, discovering local resources, and identifying local concerns and issues.

Accommodations will be made for persons with disabilities.

MaineDOT will comply with MaineCDC health and safety guidance, which is subject to change based on the status of the pandemic.

Questions, comments, or inquiries can be made directly to the Project Manager listed below.

Martin Rooney, Project Manager,
Maine Department of Transportation,
24 Child Street, 16 State House Station,
Augusta, Maine 04333-0016
